

# Advice on existing ductwork reuse

## How is this achieved?

Emerald ducted systems are built for performance, delivering high static pressure between **200Pa and 250Pa** for stronger airflow across long duct runs. They **provide efficient heating and cooling** with **quiet operation**, making them an ideal replacement for gas ducted systems.

By switching to an **Emerald Air Con Ducted System**, you can **reuse existing ductwork**, reducing both **installation time and overall costs**.

### Install efficiency

Reduced installation timeframe and costs

### Save on materials

Reuse when ducting is in good condition

### Less landfill

Sustainable solution for lower impact and costs

### Retrofit solution

Seamlessly integrates into existing infrastructure

## Re-use existing ductwork

- ✓ **Age:** Less than 10 years.
- ✓ **Integrity:** Ductwork is in good condition.
- ✓ **Duct size:** Compatible with 150mm+ duct.
- ✓ **Sealing:** Check all seals are airtight and document with photos.
- ✓ **Limited access:** Access to ductwork is unavailable.

## Replace existing ductwork

- ✗ **Age:** Older than 10 years.
- ✗ **Integrity:** Ductwork is in poor condition.
- ✗ **Duct size:** Smaller than 150mm.
